

## GESTOSIS - INDEX ( GI )

*Modification Hamdi El Kabarity . Cairo / Egypt*

This modification is based on the original Gestosis Index by Goecke. However it sets other priorities and includes a more detailed list of therapeutic possibilities.

Since EPH - Gestosis is a syndrome and not one disease the effect of the signs and symptoms on the fetus and the mother may vary greatly according to the location of the pregnant woman. i.e. cases of EPH - Gestosis in Central Africa, in rural India and in the middle of Europe require special attention focused on its specific needs.

	0	1	2	3	date	date	date
Edema pathological	occult or leg	edema legs	legs and abdomen	generalized			
Proteinuria pathological	nil or trace	-0.5 gm/L +	+0.5-1 gm/L ++	+1 gr/L +++			
Blood Pressure systolic, mmHg	less than 140	140-159	160-179	+180			
Blood pressure diastolic, mmHg	less than 90	90 - 99	100-109	+110
